Working hard

Many volunteers had no experience in laying flooring so there was definitely a learning curve. Rick Bell and Norm Van Tassel patiently taught us how to drill, click and snap vinyl flooring and at times use gentle persuasion to make it happen. We left the measuring and cutting to the pros.

There was no age limit to our volunteers.

Nothing is Straight

As the volunteers begin to measure and cut, we found out no walls were even close to being straight. This tested our volunteers on their creativity, measuring and engineering skills. What a great STEM project! However, this made for some very long hours.

Thank you volunteers for all you have done on this project.

After taking out the old partitions

Waiting for the new partitions. Stay tuned
